New Boss pedal collecting

by **1bottlerocket** » 28 Feb 2012, 06:35

Hello all,
I am new to the forum and recently started collecting older Boss pedals. I have managed to pick up an SG-1; VB-2; SP-1; and most recently an OD-1.

Right now I am interested in learning more about the OD-1. The OD-1 has a 6600 stamp. Is there a preference between the 14-pin Raytheon chip and the NEC Chip?
Thanks in advance!

The 14 pin is generally regarded to sound "better". Certainly, the circuit is electrically different to the 8-pin version.

Welcome to the forum 1bottleroc kt

That's a pretty awesome start to a Boss collection you've got there

You just started collecting and already managed to get these? Geez...i guess i'm doing something wrong

Anyway, welcome to the forum!

BTW, pics are always welcome.

Here are a couple of quick shots:

Thanks for the warm reception!

Ha-ha! I guess I am past the point of no return!

I have long been into Boss pedals but never really gave them much thought until the past few years. I have quite a few DD-2's I have been using over the years but that is the only model I really pursued for a long time.

Thanks for the kind words.

I have an OD-1 incoming tomorrow that is stamped 6600. It's the lowest number I have found to date and seems to be in pretty good nick. I'll be sure to post some detailed photos when it arrives.
