## Super Rare Boss HM-2 Heavy Metal???

by **Ptak** » 27 Jul 2012, 21:48

Only one ever made! haha using cctsim's tone stack mod and parts from a broken SD-2 i've created this guy with a dual pot! you can control Level, Low, Mid, High and Distortion!

so what do you guys think?

I was thinking of doing the same to my HM2 but just using the stock mids/highs

what do you mean by this... just changing components inside? I left everything stock and just added the dual pot.

I wish these dual potentiometers where a bit easier to find without mutilating other pedals.

I had to drill a hole in my HM2 to do the mod . This one looks very good.

cctsim

Yeah, just adding a dual pot to control the mids and highs.
What was the values of the dual pot you pot in? Isn't the one from a SD2 an audio/linear dual pot?

Was thinking of using the High/Lows knob from a MT-2, it's a 100k but that can be remedied
Ideally you would need a dual 10kB pot

the tone pot on the sd-2 is a 10kb/10kb
