Some Google translated info:

"Mr. Tate Mitsuo who was active as a guitarist of Cocteau Twins who got charismatic as a representative of the shoegazer in the 1990s and now also known as a music producer"

"Although this instrument using the BOSS enclosure, the content is a Distortion / Fuzz pedal featuring Russian Big Muff.
In addition to the basic Distorion, Tone, Volume control, there are four mini switches that can switch diverse clipping diodes, a knob capable of MIX of the diode, an input filter knob before distortion control, and a MAD Boost knob that makes Boost.
In addition, Boost switch and mid flat switch are mounted on the back, so you can enjoy a variegated Distortion / Fuzz with a general BOSS size casing."

Looks like the White/Red/Blue is the CCCP "Russian Flag" set

42,000 yen each <cough!>

Yellow = ODD1

"SD-1 OD-1 MOD ODD-1 arrives from September Sound!

This instrument is a model that makes SD-1, which is the successor to OD-1, OD-1, and has sound variations.
Tone control added by SD - 1 is discarded, and equipped with Input Filter switch.
It is a switch similar to OD - 1 set with the slide switch, or the Input Filter knob that can highlight high frequency or low frequency becomes effective.
In addition to the TOSHIBA 1S 1588 silicon asymmetry which clarified the original OD-1, a variety of sound make-up other than the sound faithful to the original OD-1 is provided by mounting LED symmetry, no diode and 3 way clipping changeover switch It is a possible pedal.

It is a user-friendly pedal that you can enjoy variations rich sound make-up in addition to the traditional OD-1 sound.
Please try by all means."
