Boss ME-X

by **DasBeef** » 23 Apr 2016, 11:41

Just about to walk out of a second hand guitar shop when I spied this at an irresistible price. Not even plugged it in yet. Pretty sure I'm going to need to read the manual. So anyone else have one? Had experience with one? Got any tips?
Probably be next week before I get a proper chance to play with it, but I'm pretty excited!

I once had one but eventually got rid of it because I found it was coloring my clean tone in a bad way.
It's been a long time so I don't remember any tips/tricks.
It's a great thing to experiment with anyway, handy that you can make patches with the added pedals also programmed on or off.

Enjoy

I love this thing. The delays, reverb and pitch shifting are all excellent! I'm selling mine because I find the stomp box format much easier, but this is probs the coolest Boss multi!
