are ds-1's SMD now?

by **charmonder** » 07 Jul 2017, 03:53

I missed the memo about this wtf!

Hmm.

No mod for you!

I think you've answered that question for yourself

I'm not really surprised they've done it though.

While it'll make modding it harder, on the plus side...there's plenty of room in the case for something else as well.

Good point, lot of space to slip in another circuit

charmonder

Like a relay for selectable true bypass. But alas...

Charmonder, could we get the serial number (and major component changes) so we can document the DS-1's latest revision on the wiki?

I may open up my DS-1-4A (which I bought new two weeks ago at Sweetwater) to see if it has the new surface-mount PCB, as well.

This is not actually my pedal but analogman website says they have been phasing in SMD versions sometime in 2016.

by **tbader** » 08 Jul 2017, 01:20

Interesting! I'm curious to see what the new SMC ones are like.

I don't believe any of the DS-1-4A versions are or will be SMC, but I'm still going to double check.

by **tbader** » 11 Jul 2017, 02:34

Well, the DS-1-4A is not surface mount.

Not sure what that means ,

But do not be surprised when one day that whole entire thing is just 1 digital chip that's programmed to sound like a DS-1.

As lord only knows why people don't care to learn manly labor anymore

It would be like having a Physical VST Plug in

Re: are ds-1's SMD now?

by **Gasgano** » 04 Sep 2017, 17:40

DS-1X is a whole different animal. It's not programmed to aound like a DS-1: It's programmed to enhance the DS-1 response and clarity, with the obvious tradeoff in noise and overall depth some look for in a DS-1.

You cannot compare these.

Gasgano

Yeah I heard that too ,

I guess they decided to use a name that they figured would help sell it.
